

**NEW**

## RISER PLATES THE COMPLETE STAIRCASE SOLUTION

PROTECT AND ENHANCE YOUR CURRENT STAIRCASES WITH RISER PLATES

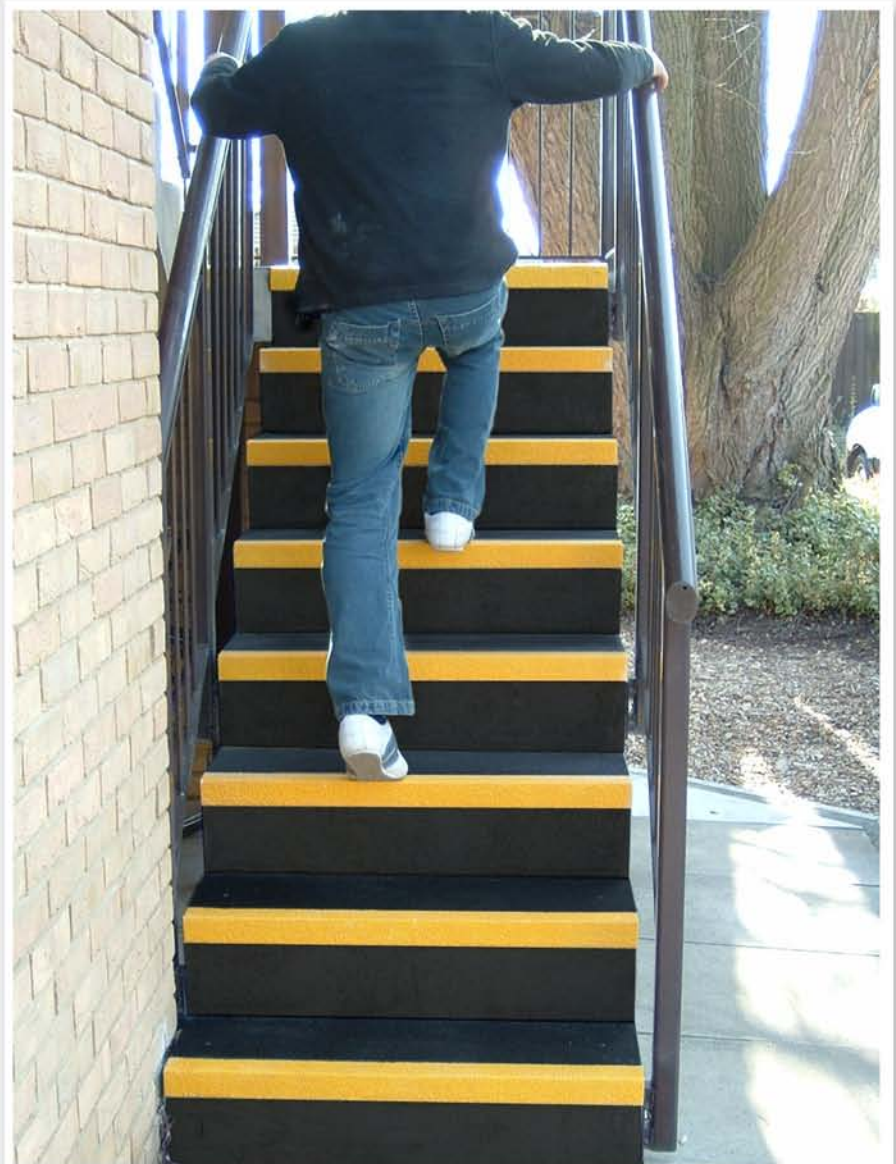

**Before**  
Uncovered concrete riser.

### Features

- Fully covers existing riser substrate
- Visually transforms existing staircase
- Constructed from high strength FibreGlass
- Maintenance free
- Quick and easy installation
- Available in a choice of widths
- Easily combines with Stair Treads

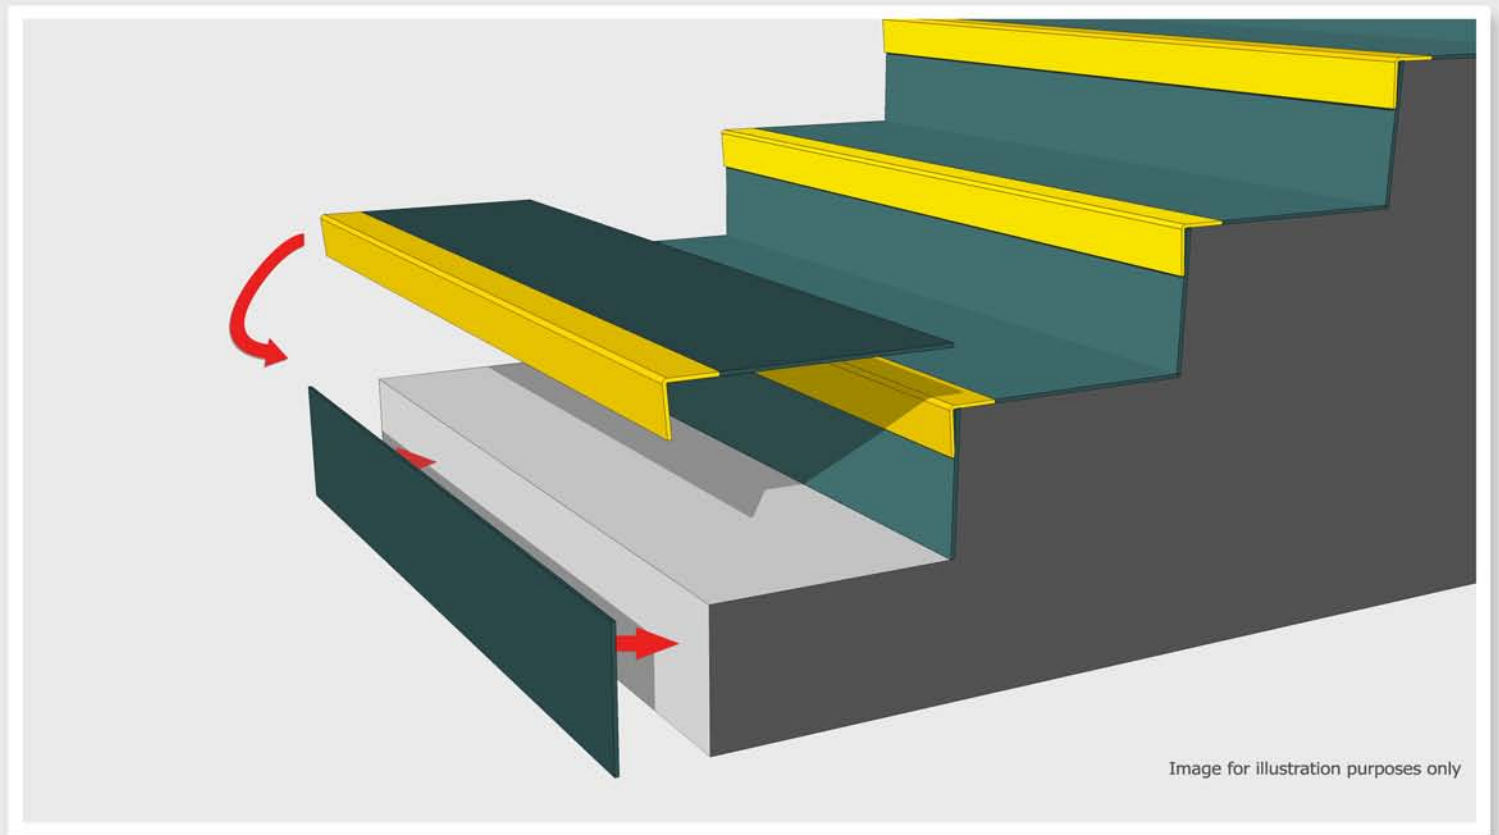

**After**  
Riser Plates covering the concrete, finishing the look.

Riser Plates are the newest addition to the SlipGrip range. The addition means that not only is the whole tread covered but the riser is completely covered offering a visually enhanced appearance.

Like the Stair Treads, the Riser Plates are made from Fibreglass materials so will not rot, twist or warp. The front surface has a smooth finish.

## Installing

The Riser Plates are simply bonded onto the riser, the Stair Tread Cover is then applied locking the Riser Plate in place. Black mastic can then be applied to the edges of the Riser Plate and Stair Tread to finish the look.

## Sizes

For new build applications, Building Regulations states that all risers should be between 150mm and 170mm. Riser Plates when combined with Stair Treads, with its 55mm nosing means that in most cases the Riser Plates can be installed without cutting down.

For retrospective works where risers are either larger or smaller than this range the Riser Plates can either be cut or supplied in two pieces.

## Colours

Riser Plates are currently available in a black finish; other colours are available subject to a minimum order quantity and extended lead time. There is no to continuously paint Risers, Riser Plates are a long term solution.
